PROFILE

Creative and technical problem solver with a background in art and design, software development, and five years at Accountflow building a reconciliation software used by accounting firms across Norway.

I enjoy understanding complex workflows, identifying user problems and turning them into clear, usable solutions. I am particularly drawn to roles that combine product design with hands-on technical work.

EXPERIENCE

Accountflow

Developer · August 2021 - Present

Developer in a small B2B SaaS team, with responsibilities extending beyond coding.

- Worked closely with customers, identifying recurring workflow and product issues through daily support, onboarding and training.
- Designed and built an Excel/CSV validator that identifies invalid data, explains errors and allows users to correct them directly in the interface.
- Worked mainly on backend and database development.
- Produced user guides and help articles, and trained customers and new employees in the product.

Subtext – language-learning product

Product design and development

Designing and building a language-learning tool that aligns subtitles across languages and turns them into reading and spaced-repetition material. I own the product flow, interaction design and implementation, and use AI to explore alternatives, prototype and debug.

Digital drawing and painting application

Product design and development

Designing and building a digital drawing and painting application with a flexible node-based system for brushes and effects. The project explores interaction patterns, layout and visual hierarchy for a complex creative tool.

PREVIOUS EXPERIENCE

Worked in healthcare and kindergarten before moving into technology.

LANGUAGES AND OTHER

Languages: Norwegian · English · Urdu

Driving licence: Class B

Design: Figma, Canva

Creative tools: Photoshop, Illustrator, InDesign, After Effects, Blender and DaVinci Resolve

AI: ChatGPT, Claude

Development: Java, Spring Boot, TypeScript/JavaScript, React, PostgreSQL, Python, Git

Graphics / GPU: WebGPU, WGSL

Work tools: Intercom, ClickUp, IntelliJ IDEA, Visual Studio Code

EDUCATION

Einar Granum School of Fine Art · 2007-2009

Foundation year and drawing programme

Medical studies · 2011-2014

Three years of medical studies - not completed

PROGRAMMING

Self-directed study · 2019-2021

Self-directed study of programming and computer science through textbooks and online courses, mainly Python/Django and JavaScript.

Validator for Excel and CSV uploads

Built to address a common customer problem: Excel and CSV files being rejected because of invalid data. The tool identifies the errors and helps users correct them before resubmission.

error - TYPE

Not a valid whole number.

Suggested: 32

Each invalid cell explains the problem and suggests a correction. Users fix issues directly in the table before resubmitting the file.

Subtext turns subtitles into learning material

A library view showing alignment status across titles and language pairs.

The screenshot shows the Subtext application interface for the movie 'Pulp Fiction' (1994). The top navigation bar includes 'Subtext', 'Library', 'Study', 'Admin', 'Superadmin', and 'Sign out'. The main content area is divided into two sections: 'Subtitle files' and 'Alignment'.

Subtitle files: This section shows two subtitle files: 'Pulp.Fiction.-English.srt' (2376 cues, 2 hr 29 min) and 'Pulp Fiction-French.srt' (1884 cues, 2 hr 34 min). Below these is a dashed box labeled 'Drop subtitle files here' with a 'Choose files' button.

Alignment: This section shows the alignment of the two subtitle files. It includes a 'draft' status, a 'Re-align these files' button, and a progress bar. The progress bar shows 88% lines paired, 1783 matches, and 79% mean confidence. Below the progress bar, it states 'The two files were shifted +3.1s.' and provides buttons for 'Read' and 'Check the uncertain ones'. At the bottom, there are buttons to download the corrected subtitles for both languages: 'EN.srt' and 'FR.srt'.

At the bottom, there are buttons to download the corrected subtitles for both languages: 'EN.srt' and 'FR.srt'.

From subtitle files to usable learning material: align languages, review uncertain matches and read dialogue in context.

A single study flow from prompt to rating: listen, reveal the translation, then rate the card for spaced repetition.
